EXAMINER

UHLENHAKE, JASON S

ART UNIT PAPER NUMBER

2853

DATE MAILED: 11/21/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	Application No. 10/783,094	Applicant(s) WATANABE ET AL.	
	Examiner Jason Uhlenhake	Art Unit 2853	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 19 September 2006.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-18 and 21-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-18 and 21-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 12, 13, 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) in view of Asauchi et al (U.S. Pat. 6,431,676).

#### ***Choi et al discloses:***

- ***regarding claims 1, 12, 21***, condition storage section being configured and arranged to store an optimal weight and velocity of droplets to be discharged from a discharge head (Column 6, Lines 48-50); weight measuring section configured and arranged to measure the weight of the droplets discharged from the discharge head (Column 6, Lines 45-46); speed measuring section configured and arranged to measure the velocity of the droplets discharged from the discharge head (Column 6, Lines 38-55; Column 12, Lines 56-58)
- waveform adjusting section configured and arranged to read basic drive waveform from the basic drive waveform storage section and to adjust the basic drive waveform to an adjusted drive waveform so that the weight that is measured by the weight measuring section and the velocity that is measured by the speed measuring

Art Unit: 2853

section substantially match the optimal weight and velocity that are stored in the condition storage section for the adjusted drive waveform (Column 6, Lines 48 – 64)

- ***further regarding claims 12, 21***, a discharge head configured and arranged to form the liquid material into droplets (Abstract); drive control section configured to supply a drive waveform to the discharge head to discharge the droplets (Column 4, Lines 45 – 68)

- ***regarding claims 2 and 13***, a physical property (weight/velocity) acquisition section configured and arranged to acquire physical property values of the droplets discharged from the discharge head; basic drive waveform storage to store a plurality of basic drive waveforms; waveform adjusting section configured and arranged to read basic drive waveform from the basic drive waveform storage section and to adjust the basic drive waveform to an adjusted drive waveform that corresponds to the physical property values acquired by the physical property value acquisition section (Column 5, Lines 47 – 55; Column 6, Lines 33 – 37)

***Choi et al does not disclose expressly the following:***

- ***regarding claims 1, 2, 13***, basic drive waveform storage section being configured and arranged to store a basic drive waveform; adjusted waveform storage section being configured and arranged to store the adjusted drive waveform that is adjusted by the waveform adjusting section;

***Asauchi et al discloses:***

- ***regarding claims 1, 2, 13***, basic drive waveform storage section being configured and arranged to store a basic drive waveform (Abstract; Column 2, Lines 30

Art Unit: 2853

– 42), for the purpose of; adjusted waveform storage section being configured and arranged to store the adjusted drive waveform that is adjusted by the waveform adjusting section (Column 4, Lines 12 – 16; Claim 20), for the purpose of generating driving waveforms to actuate driving elements of a print head

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of basic drive waveform storage section being configured and arranged to store a basic drive waveform; adjusted waveform storage section being configured and arranged to store the adjusted drive waveform that is adjusted by the waveform adjusting section as taught by Asauchi et al into the device of Choi et al. The motivation for doing so would have been to generate driving waveforms to actuate driving elements of a print head.

Claims 3 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Iwamura (U.S. Pat. 6,257,687)

***Choi et al as modified by Asauchi et al discloses all the claimed limitations above except for the following:***

- ***regarding claim 3 and claim 14***, waveform-adjusting section further configured and arranged to correct the basic drive waveform in accordance with a natural period of the discharge head, and adjust the basic drive waveform

***Iwamura discloses:***

- **regarding claim 3 and claim 14**, waveform-adjusting section further configured and arranged to correct the basic drive waveform in accordance with a natural period of the discharge head, and adjust the basic drive waveform (Abstract; Column 3, Lines 40 – 46; Column 4, Lines 15 – 36), for the purpose of forming, in a stable manner, fine ink drops while maintaining high efficiency

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of waveform-adjusting section further configured and arranged to correct the basic drive waveform in accordance with a natural period of the discharge head, and adjust the basic drive waveform as taught by Iwamura into the device of Choi et al as modified by Asauchi et al. The motivation for doing so would have been to form, in a stable manner, fine ink drops while maintaining high efficiency.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Iwasawa et al (U.S. Pat. 4,908,635).

***Choi et al as modified by Asauchi et al discloses all the claimed limitations above except for the following:***

- **regarding claim 4**, the physical property value acquisition section is further configured and arranged to acquire at least one of viscosity, surface tension, contact angle, and density as the physical property values of the droplets

- **regarding claim 5**, the physical property value acquisition section includes a measuring section that is configured and arranged to measure at least one of physical property of the droplets

***Iwasawa et al discloses:***

- **regarding claim 4**, the physical property value acquisition section is further configured and arranged to acquire at least one of viscosity, surface tension, contact angle, and density as the physical property values of the droplets (Column 2, Lines 5 – 30), for the purpose of preventing recording thickness irregularity due to the difference in characteristic between the nozzles.

- **regarding claim 5**, the physical property value acquisition section includes a measuring section that is configured and arranged to measure at least one of physical property of the droplets (Column 2, Lines 5 – 30), for the purpose of preventing recording thickness irregularity due to the difference in characteristic between the nozzles.

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of the physical property value acquisition section is further configured and arranged to acquire at least one of viscosity, surface tension, contact angle, and density as the physical property values of the droplets; the physical property value acquisition section includes a measuring section that is configured and arranged to measure at least one of physical property of the droplets as taught by Iwasawa et al into the device of Choi et al as modified by

Art Unit: 2853

Asauchi et al. The motivation for doing so would have been to prevent recording thickness irregularity due to the difference in characteristic between the nozzles.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Umetani et al (U.S. Pub. 2003/0193539).

***Choi et al as modified by Asauchi et al discloses all of the claimed limitations except for the following:***

- ***regarding claim 6***, weight measuring section comprises: an electrode configured and arranged to face the discharge head; an oscillator configured and arranged to change frequency in accordance with the weight of a substance deposited on an electrode surface; a frequency counter configured and arranged to measure the frequency of the oscillator; calculating section configured and arranged to calculate the weight of the droplets on the basis of the difference in frequency before and after droplet deposition measured with the aid of the frequency counter

***Umetani et al discloses:***

- ***regarding claim 6***, an electrode (22) configured and arranged to face the discharge head (Paragraph 0045; Figure 3); an oscillator configured and arranged to change frequency in accordance with the weight of a substance deposited on an electrode surface (Paragraph 0007; Claim 1); a frequency counter configured and arranged to measure the frequency of the oscillator (Paragraph 0060); calculating section (35) configured and arranged to calculate the weight of the droplets on the basis

Art Unit: 2853

of the difference in frequency before and after droplet deposition measured with the aid of the frequency counter (Paragraph 0047; Claim 8), for the purpose of measuring the amount of ink ejected from the recording head with high accuracy.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of an electrode configured and arranged to face the discharge head; an oscillator configured and arranged to change frequency in accordance with the weight of a substance deposited on an electrode surface; a frequency counter configured and arranged to measure the frequency of the oscillator; calculating section configured and arranged to calculate the weight of the droplets on the basis of the difference in frequency before and after droplet deposition measured with the aid of the frequency counter as taught by Umetani et al into the device of Choi et al as modified by Asauchi et al. The motivation for doing so would have been to measure the amount of ink ejected from the recording head with high accuracy.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) and Iwasawa et al (U.S. Pat. 4,908,635) as applied to claim 1 above, and further in view of Umetani et al (U.S. Pub. 2003/0193539).

***Choi et al as modified by Asauchi et al and Iwasawa et al discloses all of the claimed limitations except for the following:***

- **regarding claim 7**, compute a viscosity of the droplets with aid of an amplitude-damping characteristics of the oscillator when the droplets deposit on the electrode surface

***Umetani et al discloses:***

- **regarding claim 7**, compute a viscosity of the droplets with aid of an amplitude-damping characteristics of the oscillator when the droplets deposit on the electrode surface (Paragraphs 0055 – 0056), for the purpose of improving the quality of printing.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of computing a viscosity of the droplets with aid of an amplitude-damping characteristics of the oscillator when the droplets deposit on the electrode surface as taught by Umetani et al into the device of Choi et al as modified by Asauchi et al and Iwasawa et al. The motivation for doing so would have been to improve the quality of printing.

Claims 8 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Arakawa et al (U.S. Pat. 6,843,548)

***Choi et al as modified by Asauchi et al discloses all of the claimed limitations except for the following:***

- **regarding claim 8 and claim 15**, the speed measuring section is configured to compute the velocity of the droplets by using the position of the droplets

Art Unit: 2853

discharged from the discharge head at two different points in time and using the time difference between these two points in time

***Arakawa et al discloses:***

- ***regarding claim 8 and claim 15***, the speed measuring section is configured to compute the velocity of the droplets by using the position of the droplets discharged from the discharge head at two different points in time and using the time difference between these two points in time (Column 5, Lines 12 – 25), for the purpose of printing images with stable accuracy.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of the speed measuring section is configured to compute the velocity of the droplets by using the position of the droplets discharged from the discharge head at two different points in time and using the time difference between these two points in time as taught Arakawa et al into the device of Choi et al as modified by Asauchi et al. The motivation would have been to print images with stable accuracy.

Claims 9, 11, 16, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Suzuki (U.S. Pub. 2002/0005873)

***Choi et al as modified by Asauchi et al discloses***

Art Unit: 2853

- **regarding claim 9 and claim 16**, waveform-adjusting section is further configured and arranged to measure a variation in the velocity of the droplets from a plurality of nozzles of the discharge head (Column 6, Lines 48 – 64)

- **regarding claim 11 and claim 18**, waveform adjusting section of the basic drive waveform so that the weight and velocity of the droplets substantially match the values stored in the condition storage section (Column 6, Lines 48 – 64)

***Choi et al as modified by Asauchi et al does not disclose expressly the following:***

- **regarding claim 9 and claim 16**, waveform-adjusting section configured and arranged to change the drive waveform by using at least one of an early electric potential VC, an electric potential VH during expanding a liquid filled unit of the discharge head and an electric potential VL during contracting the liquid-filled unit of the discharge head

- configured and arranged to determine a hold time to maintain the electric potential VH of the basic drive waveform so that the variation is minimal

- **regarding claim 11 and claim 18**, waveform adjusting section configured to determine an electric potential VH and an early electric potential VC of the basic drive waveform

***Suzuki discloses***

- **regarding claim 9 and claim 16**, waveform-adjusting section configured and arranged to change the drive waveform by using at least one of an early electric potential VC, an electric potential VH during expanding a liquid filled unit of the

Art Unit: 2853

discharge head and an electric potential VL during contracting he liquid-filled unit of the discharge head; configured and arranged to determine a hold time to maintain the electric potential VH of the basic drive waveform so that the variation is minimal (Paragraph 0073), for the purpose of improving the ink discharging performance of the discharge head.

- ***regarding claim 11 and claim 18***, waveform adjusting section configured to determine an electric potential VH and an early electric potential VC of the basic drive waveform (Paragraph 0073), for the purpose of improving the ink discharging performance of the discharge head.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of waveform-adjusting section configured and arranged to change the drive waveform by using at least one of an early electric potential VC, an electric potential VH during expanding a liquid filled unit of the discharge head and an electric potential VL during contracting he liquid-filled nit of the discharge head; configured and arranged to determine a hold time to maintain the electric potential VH of the basic drive waveform so that the variation is minimal; waveform adjusting section configured to determine an electric potential VH and an early electric potential VC of the basic drive waveform as taught by Suzuki into the device of Choi et al as modified by Asauchi et al. The motivation for doing so would have been to improve the ink discharging performance of the discharge head.

Claims 10 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 1 above, and further in view of Matsuo (U.S. Pat. 6,488,349)

***Choi et al as modified by Asauchi et al discloses all of the claimed limitations except for the following:***

- ***regarding claim 10 and claim 17***, waveform-adjusting section is further configured and arranged to determine a hold time to maintain an electric potential VL of the basic drive waveform so that a decrease in the weight of the droplets in a high frequency region of the basic drive waveform is minimal

***Matsuo et al discloses***

- ***regarding claim 10 and claim 17***, waveform-adjusting section is further configured and arranged to determine a hold time to maintain an electric potential VL of the basic drive waveform so that a decrease in the weight of the droplets in a high frequency region of the basic drive waveform is minimal (Column 16, Lines 35 – 48) , for the purpose of improving the ink discharging performance of the discharge head.

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of waveform-adjusting section is further configured and arranged to determine a hold time to maintain an electric potential VL of the basic drive waveform so that a decrease in the weight of the droplets in a high frequency region of the basic drive waveform is minimal as taught by Matsuo et al into the device of Choi et al as modified by Asauchi et al. The motivation for doing so would have been to improve the ink discharging performance of the discharge head.

Claims 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 21 above, and further in view of Schantz (U.S. Pat. 6,998,230).

***Choi as modified by Asauchi discloses all the claimed limitations above except for the following:***

- ***regarding claim 22***, an electrooptical device
- ***regarding claim 23***, electronic equipment equipped with an electrooptical device

***Schantz discloses:***

- ***regarding claims 22, 23***, electronic equipment equipped with an electrooptical device (Display; Column 10, Lines 37-39; Column 14, Lines 54-60), for the purpose of displaying information concerning the status of the apparatus

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of Schantz into the device of Choi as modified by Asauchi, for the purpose of displaying information concerning the status of the apparatus

Claims 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi et al (U.S. Pat. 6,527,372) as modified by Asauchi et al (U.S. Pat. 6,431,676) as applied to claim 21 above, and further in view of Chun et al (U.S. Pat. 5,266,098)

***Choi as modified by Asauchi discloses all the claimed limitations except for the following:***

- ***regarding claim 24***, the speed measuring section has a camera and a strobe light

***Chun discloses:***

- ***regarding claim 24***, the speed measuring section has a camera and a strobe light (Column 5, Lines 40-50), for the purpose of adjusting droplet size and vibration frequency

At the time the invention was made it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of Chun into the device of Choi as modified by Asauchi, for the purpose of adjusting droplet size and vibration frequency

### ***Response to Arguments***

Applicant's arguments filed 9/19/2006 have been fully considered but they are not persuasive. Applicant argues that Choi does not disclose a weight measuring section that measures the weight of droplets that have been discharged from the discharge head, and a speed measuring section that measures the velocity of droplets that have been discharged. However, Choi discloses a process of measuring a firing (discharge) velocity (speed) and a size (weight) of ink droplets of a printer head (Column 6, Lines 45-46)

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

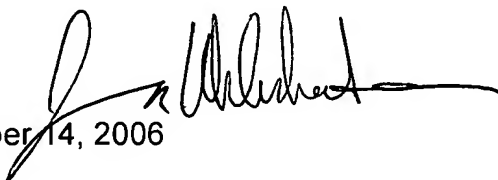

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

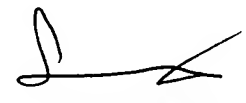

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Uhlenhake whose telephone number is (571) 272-5916. The examiner can normally be reached on Monday - Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
